

Aviara's Base Nutritional System

Clear Vision

More than 28 million Americans over age 40 have eye ailments that put them at risk for vision loss and blindness - that's nearly one-quarter of the entire over-40 population. Children are also a prime target market for eye health ingredients, as the eye grows and changes in key stages of early development, and visual learning is prominent in a child's educational development.

Proper nutrition is essential to maintain your eye health. Taking Aviara's base System is a great place to start in obtaining these nutrients.
